Figure 4.8: Typical cross-section of a separated protected bicycle lane (from Cycling Aspects of Austroads Guides (2011) - see right)

Note: Example is a typical cross-section constructed in Melbourne with a bicycle lane width of 2 m.
Buffered Bike Lane

Motorists stay to the left of the buffered area. Don’t use the bike lane to pass other vehicles.

Cyclists stay in the bike lane and enjoy the extra elbow room.
